

The Use of Technology in Student Projects

Participants will leave the workshop with ways to infuse technology into their plans for student projects. During the workshop, educators will...

- add to their “technology toolbox”
- analyze models of student projects that are high quality examples of technology integration and student work
- create and/or revise a unit plan to take back to the classroom.

This workshop also provides participants an opportunity to establish a network of teachers who are passionate about technology integration best practices in project based learning classrooms.

When: November 15, 2017

Time: 8:30am—3:30pm

Where: CESA 9, Tomahawk
