**Have you seen the research
behind the power of video
modeling to support student
success...?**

Video modeling is a growing evidence-based practice for teaching individuals with ASD and other disabilities over the last decade. It has been used to teach a wide range of behaviors including social/emotional skills, adaptive behavior, life skills, academics, and play skills. Participants will learn how to create, edit and use video to empower students and teach skills needed to be successful in their environments.

**Please bring your own device to
load helpful apps!**

We will have approx. 10 devices on-hand available for use
