

What is Bal-A-Vis-X?

Bal-A-Vis-X is a series of more than 300 Balance- Auditory-Vision-eXercises, of varied complexity, deeply rooted in rhythm.

Most exercises are done with sand-filled bags or racquetballs, often while standing on a balance board. The exercises require thousands of mid-line crossings in three dimensions.

They are steadily rhythmic, with a pronounced auditory foundation, executed at a pace that naturally results from proper physical techniques. It demands cooperation, promotes self-challenge, fosters both self-esteem and peer teaching...and it is FUN!

What are the Benefits?

Visual tracking, confidence and self discipline, student leadership skills, community building, decreased impulsivity, increased attention span, auditory skills, increased ability to hold rhythmic patterns, motor planning, hand eye coordination, bilateral and full body coordination, and balance.

Cancelations made less than three
weeks prior to the event date will be
charged.

What Will I Learn?

- How to use BAVX with regular ed students, special needs students, and patients from pediatrics to geriatrics.
- How to perform a dominance profile and eye tracking assessment.
- Over 100 individual, partner, and group exercises. BAVX is an engaging program of purposeful physical movement.
- And it's just plain fun!
- Classroom Teachers
- Occupational Therapists
- Physical Education Teachers
- Reading Specialists
- Pupil Services Staff
- Parents

Who Should Attend?

For over 18 years, Bill and his teenage
assistants have brought BAVX to 15,000
teachers and parents on three continents.
Bill continues to work with clients of all
ages and varied abilities in his private
BAVX studio in Wichita, Kansas.
For many years, you have the content of BAVX
grasp of how to modify exercises for those
with severe special needs, such as trauma
victims, you have the content of BAVX
of brain function and experimental
Along with Bill's evolving understanding
of the system of exercises known as Bal-
A-Vis-X.
He wondered if he should first address
the children's physical issues, then worry
about the cognitive. The search for that
answer began his trial-and-error journey
to the system of exercises known as Bal-
A-Vis-X.

Bill was struck by his student's frequent
struggles-to focus and maintain
attention; control eye movement; walk
with consistent gait; throw and catch;
maintain balance; and distinguish left
from right, and how these physical
dysfunctions corresponded with academic
and social problems.
Along with Bill's evolving understanding
of the system of exercises known as Bal-
A-Vis-X.
