

BLOG Book Group for Early Childhood Educators

Make math learning both meaningful and fun by building on children's natural curiosity to help them grow into confident problem solvers and investigators of math concepts. With 20 activities appropriate for children in preschool and kindergarten based on new and classic children's books, games, and classroom routines, challenge children to think more complexly about the math in everything they see, hear, and do.

We will be adding a special twist to the book group by discussing inclusive practices for children with specific learning needs, as well as emphasizing the literacy component. There will be a required weekly reading assignment and an obligation to post your thoughts and sharings on the blog.

When: Starting February 10, 2020,
continuing for 5 weeks

Cost: FREE - You must purchase the book on your own by the start date of the Book Study
