

Makerspaces?

Put simply, Makerspaces are any location where creation takes place. It can be a library, a classroom, the tech ed shop or the kitchen lab. Makerspaces can be as simple or complex as location, budget and learners dictate!

21st Century learning requires our students to be collaborative and communicative creators and be able to navigate through higher order thinking skills necessary for the world beyond school walls.

How do you get started? Join us for CESA #4's Makerspace Experience where participants will explore four engaging, hands-on and fun Makerspaces in elementary and secondary-focused settings and walk away with information and resources to get started with Makerspaces at their own schools!

- *This workshop aligns with Common Core State Standards, NextGen Science Standards and Educator Effectiveness Standards.*
- *Viterbo University credit and Professional Development hours are also available for each workshop*

Elementary
K-5 **Secondary**
6-12

****COMBINED* For one all-inclusive day!***
