An engaging and motivating workshop that looks at the exciting things that happen when educators step outside the box and try new teaching strategies and tools. **Presenter Kevin Honeycutt** helps teachers of all grade levels and subject areas become comfortable with project-based learning and 21st century teaching and learning while incorporating the latest technology. Teachers will leave motivated and equipped with ideas for using technology and providing learning opportunities that are relevant and promote critical thinking and problem solving skills. This workshop is a must for educators who are inspired to give students every advantage as they prepare to enter the 21st century work environment.

About the Presenter

Kevin Honeycutt spent 13 years teaching art in the classroom, and during that tenure, he noticed that in many cases he was preparing learners for a world that no longer existed. As technology integration began to become the norm in his practice, he saw the amazing value of “tradigital” teaching. The tools and practices that Kevin was using began to get noticed and soon a constant stream of visitors were streaming through his small town art room to see what the seamless use of technology in teaching might look like. Kevin blends technology tools with project-based learning approaches to simulate real life and add authenticity for learners. He shares his ideas at schools and conferences all over the country and his podcast “Driving Questions in Education” allows him to share many of his ideas while he is on the road. The podcast is consistently one of the top three K-12 video podcasts on iTunes. He is a passionate advocate for re-igniting learning among educators for the benefit of learners.
