Build, Program, and Experiment with Wicked Cool Robots!

LEGO EV3 Robotics
May 28, 2015 - 9:00 am –2:30 pm

Presenter: Jacob Granahan, Technology Integrator
Held at: CESA 2, 1221 Innovation Dr., Whitewater

Robotics is a great way to introduce students to engineering and technology. LEGO EV3 robotics combines the familiarity of building with LEGOS, and a drag and drop programming language similar to Scratch to create functional robots. No prior technology or programming experience is required. Ignite student engagement and energize learning through real-life problem solving. Robotics combines engineering, technology, and mathematics concepts with soft skills, such as creative thinking, problem solving, teamwork, and communication skills, boosting 21st-century learning skills.

Topics to include:

- ♦ **Build an EV3® Robot**
- ♦ **Program for Basic Moves**
- ♦ **Introduction to each of the 4 sensors**
- ♦ **Integrate sensors to accomplish tasks**
- ♦ **Experience some Advanced Programming**
- ♦ **Sample curriculum provided**

Event Fee: $25.00 per person if a CESA 2 Instructional Technology Services Member
$150.00 per person if not a CESA 2 Instructional Technology Services Member
