Ten years ago you could walk across a middle school or high school and not see a single cell phone. Now up to 75 percent of U.S. teens own mobile phones. Schools and educators find themselves having to make decisions never considered before.

- Is it appropriate to use a cell phone during passing period?
- What about social media in the classroom?
- Which websites should be opened to students?
- What do our students need to know to exercise positive digital citizenship?
- What are the implications of our digital tattoo?

On top of mobile devices being an additional appendage, there's the myriad of apps that we, as adults, may never stay on top of. Not only do teens use them, they use them all the time. Somehow, we need to be aware of the usage and how we can leverage technology for purposeful learning.

New technology has bewildered those who have grown up without it. And it almost always raises questions about wise and ethical ways to use it. It's easy for educators (parents, too!) to throw up our hands in despair of ever getting a handle on it, but what we don't know about your teens' technology use may hurt them. On the other hand, staying current on our youth's techno-habits can provide opportunities for both meaningful conversations and powerful learning experiences
