There are many uses for an iPod/iPad with students with special needs. This workshop/session will go over some basics of setting up and using an iPod/iPad for use with these students. Applications for the following areas will also be discussed and demonstrated: AAC, social skills, literacy, math, data collection, behavior management, music, songs, art and games. Resources for finding apps, podcasts, books and music, and for setting up the accessibility features, will also be shared. Participants should bring an iPod/iPad and a laptop with iTunes software installed if possible. You may want to have an iTunes account set up as well.

Presented by Deb Donley, Educational Technology Coordinator, AT Specialist, Verona Area School District.
