

# EARLY CHILDHOOD MATH WORKSHOP

Young children love to count things! Counting collections is a great way to get kids excited about mathematics and hone and extend early counting principles. By making counting explicit, hands-on, and fun, Counting Collections provides a motivation for the mathematics of early understanding of quantity, place value understanding, skip counting, and addition. We will engage in Counting Collections, and explore the initial launch with children as well as variations to make the activity meaningful for all learners.

This session will feature activities you can use the next day with your students and each are grounded in developmental learning trajectories for early childhood mathematics. The session will be presented in an engaging, interactive format.

**Presenter:** Melissa Hedges, WI  
Dept. of Public Instruction,  
Mathematics Consultant

Register Online by MARCH 7 at:
