

Technology using AAC Devices

Supporting Student Learning with AAC Devices

Ready to warm up your classroom with new ideas?

Join us Feb 4th, to learn how we can support student learning and use of vocabulary across daily activities using AAC devices. This training will educate on best practices with regards to vocabulary selection to support communication development through the use of core vocabulary. We will take a practical approach to learn how this can be implemented within classroom activities, without "recreating the wheel." Specific AAC modeling and implementations strategies will be taught with suggestions to encourage increased participation from your AAC users. Participants will have the opportunity to brainstorm and/or make and take lessons that are directly applicable to their own classrooms. There will be opportunities for group discussion for collaboration on tough cases.

Explore the effective marriage of technology and student performance in an effort to better serve our students.

Who should attend and what to bring?

Teams are encouraged - SLPs, Special Education & EC teachers, paraprofessionals that work directly with students who use AAC devices.

Not mandatory, but would be beneficial as a form of "make and take," to bring technology for, Boardmaker/picture symbol software and or Speech generating device/iPad Communication App to program and make additions to. These do not necessarily need to be student specific. Register at:
