All About Universal Design for Learning:

100 Ways to Teach All Learners

Universal Design for Learning (UDL) is an educational framework that allows teachers and leaders to set relevant learning goals, anticipate and identify barriers to learning, design environments and instruction that supports the variability across students, and create more equitable and inclusive learning opportunities.
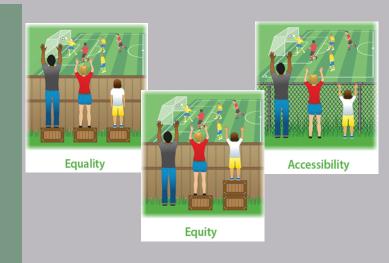

UDL framework is designed to allow for multiple means of engagement, representation, and action and expression as it engages the 3 networks of the brain that support learning.
UDL is an identified strategy to support a district's continuous improvement plans.
Join us for a day of information gathering and active learning on how you can transform your teaching and student learning with UDL principles.

Participants will also receive a copy of "Universal Design for Learning in Action: 100 Ways to Teach All Learners" by Whitney H. Rapp.

Wednesday, November 13, 2019
