

# INTRODUCTION TO COMPUTER SCIENCE FOR MS / HS

March 22, 2023 | 9-2:30 | CESA 12

Computer science is important for middle and high school students because it provides them with a foundation for understanding and working with technology, which is increasingly prevalent in today's society. It also helps students develop problem-solving, critical thinking, and creativity skills that are valuable in any field. CS can open up a wide range of career opportunities in fields such as software development, data analysis, and artificial intelligence.

This workshop is designed for 7-12 educators who have little to no experience in computer science, but are looking to integrate CS into their curriculum. Participants will gain a basic understanding of computer science concepts and learn how to teach them in a fun and engaging way.

#### **During the workshop, participants will learn about:**

- How to integrate CS into other subjects such as math, science, and social studies
- FREE resources and lesson plans for teaching computer science in the classroom

Presenter:  
Diamond Gulick  
Educational Consultant
