The AI for Education workshop is designed for educators who want to explore the potential of Artificial Intelligence (AI) in the classroom. The workshop will start with an introduction to AI, covering what it is and how it works. Attendees will also learn about the various ways AI can be used in and for the classroom as a "personal assistant." This includes time-saving tasks such as lesson planning, feedback and grading, personalized learning, intelligent tutoring…the possibilities are endless! The afternoon focus will be personalized so educators can focus on AI in their particular role and content area. We will close the day reflecting on ways to use artificial intelligence **FOR** and **IN** the classroom…and in our personal lives.
