

MATH INTERVENTION WORKGROUP

This workgroup is designed for teams of educators that are ready to empower struggling math learners with targeted support and intervention strategies. During this series, participants will collaborate and network about how they are using assessment to make instructional decisions, explore evidence-based interventions, and unpack IES practice guide recommendations for assisting students who are struggling with mathematics. Teams will also have time to share and build resources that are relevant to their needs.

In addition to three full-day in-person sessions, teams will have access to a virtual workspace, and virtual team check-ins between sessions.
