

# PhotoShop Image Editing

Art Paulson, Facilitator

You have collected images on a digital camera, but you don't have a clue about what comes next! By attending this hands-on class, you will discover the magic of digital imaging. Participants will collect photos and then use Photoshop, the professional image editing software package, to crop, rotate, smudge, color and fix the images that are taken during the class. You will also learn how your digital camera works as well as tips for getting the best possible photos from your digital camera. Once you are comfortable using Photoshop, you will find that you will be able to work more efficiently, explore creative options, and produce the highest quality for print, the Web and anywhere else.

**Registration will be accepted on a first-come first-serve basis.  
Limit of 20 participants.**
