The Common Core State Standards, national academic standards for K-12 schools in the United States have now been adopted by 47 of the 50 states. This makes them the pre-eminent source of what is being taught in the vast majority of public schools in America.

Technology integration plays an integral role in reaching the CCSS, yet not much is offered in the "how-to". Participants in this workshop will learn about what the Common Core Standards in both English Language Arts and Math areas mean for integration of technology. Expect to build a "Tech Toolkit" with a wealth of resources to share with students and colleagues as you journey forward in the Common Core...
